ABOUT

Mid-Level Full Stack / AI Engineer and SaaS Architect who builds production systems where the architecture decision is the business outcome. Promoted from Junior to Mid-Level in just 6 months at Naranja Labs by owning end-to-end solutions for US-market clients. Architected the platform that runs a US studio's 3D-rendering pipeline end-to-end — from client proposals through stage-based production (clay to final renders) to delivery and billing — managing 300+ projects at a verified ~68% profit margin, evolved a content platform into a multi-model RAG orchestrator that cut AI latency and cost by 66%. Independently architects complete multi-tenant SaaS products — from CRMs to real-time chat-as-a-service — **built to sell**, with billing, auth, and per-tenant data isolation.

Pairs strong fundamentals like **TDD, type-safe APIs, and clean architecture** with a disciplined **AI-augmented workflow**, treating AI as an instrument under engineering control, not autopilot. Works fluently across an agentic toolchain — **Cursor, Claude Code, and CLI agents** — applying studied techniques such as spec-driven development, agentic looping, and custom skills and sub-agents to compress multi-service roadmaps, while staying token-aware and reviewing every output to keep changes in scope and prevent unsafe code from reaching production.

TECHNICAL SKILLS:

- **Languages & Soft Skills:** TypeScript, JavaScript, Python, SQL (PostgreSQL), HTML/CSS. **Problem-Solving, Cross-functional Collaboration, Adaptability, Mentoring, Strategic Planning.**
- **Frontend:** React.js, Next.js (App Router), TailwindCSS, ShadCN, Radix UI, Astro.js, React Hook Form, Headless CMS
- **Backend & AI:** Node.js (NestJS, Hono, tRPC), Python (FastAPI), REST APIs, gRPC, WebSocket, SDK, Redis, RabbitMQ, Prisma/Drizzle, Zod.
- **AI & Agents:** RAG, LangChain, OpenAI API, OpenRouter (Multi-model Orchestration), AI Agents, Vector Embeddings, Semantic Search / Caching, Document Processing, LLM Integration, AI SDK.
- **AI-First Development:** Agentic Coding (Cursor & Claude Code), LLM-based CLI Tooling, Spec-Driven Development, Agentic Looping, Custom Skills & Sub-Agents, Responsible AI-Augmented Development.

- **DevOps & Testing:** Docker, AWS (S3/EC2/Lightsail), Uploadthing, Vercel, Cloudflare Workers, Supabase, CI/CD, Jest, Vitest, Playwright, Pytest, Turborepo, Bun, Infisical, Git, Github.
- **Focus Areas:** AI Agent Development, RAG Systems, Multi-LLM Orchestration, Financial / Analytics Dashboards, Data Integrity & Auditing, Scalability, Clean Architecture, Performance Optimization, Testing Infrastructure.

WORK EXPERIENCE

Naranja Labs | *Mid-Level Full Stack Engineer* | May 2025 – Present

Remote

- **Promoted to Mid-Level within 6 months** due to high impact on product architecture and technical leadership.
- Architected a mission-critical platform for managing **3D rendering projects** through stage-based production workflows (client proposals → clay/color drafts → final renders, with render-artist jobs, image feedback, and QA) - (US market) — a **300+ project pipeline operating at a verified ~68% profit margin** — with a decoupled hook architecture, role-based access control (RBAC), and a standalone read-only audit harness that verified every financial KPI against production data to the cent (0 divergences).
- Architected and shipped the **financial dashboard**, replacing the client's spreadsheets and ad-hoc invoicing with a single financial source of truth — giving leadership real-time visibility into project profitability and KPIs across all business units, surfacing projects trending toward unprofitability before they lose money, and turning payment requests and milestone invoicing into a streamlined, trackable workflow.
- Led the evolution of our content-generation platform from a single OpenAI integration into a **multi-model orchestration architecture** — routing across multiple LLM providers behind a well-structured RAG pipeline and decoupled microservices for resilience, cost control, and provider flexibility.
- **Optimized AI pipeline performance by 66%** through intelligent caching, semantic chunking, and context reuse, eliminating redundant document processing and significantly reducing API costs.
- Acted as a key technical decision-maker for architectural patterns, choosing between Node.js and Python microservices to maximize performance and scalability — **improving system scalability by 40%** via the transition to specialized microservices.

Stack: TypeScript · Python · Next.js · React · NestJS (API Gateway) · Hono · FastAPI · Microservices · REST & OpenAPI · tRPC · Drizzle ORM · Prisma · PostgreSQL · pgvector · Supabase · Better Auth · JWT / Passport · RAG · LangChain · LangGraph · Multi-LLM

Orchestration · Stripe · AWS (S3) · Docker · Turborepo · Sentry · PostHog · Zod · Vitest · TDD · CI/CD

Naranja Labs | *Frontend Developer (Freelance)* | Jan 2025 – Apr 2025

Remote

- **High-Conversion Interfaces:** Developed real estate landing pages for the US market, optimized for engagement and pixel-perfect implementation from Figma designs.
- **Enhanced user engagement by 35%** on US real estate landing pages by optimizing Core Web Vitals and implementing pixel-perfect Figma designs.
- **Scalable UI Architecture:** Introduced a centralized Design System, reducing UI inconsistencies and accelerating development cycles for subsequent features.
- **Advanced Form Management:** Integrated complex validation and communication funnels using React Hook Form, Zod, and Resend, increasing buyer-agent interaction rates.
- Leveraged Astro.js for static generation of ultra-fast marketing pages, integrating seamlessly with dynamic components from React and TailwindCSS.
- Applied architectural best practices including component-based development, SOLID principles, and design patterns to ensure scalable, maintainable code.
- **CMS Integration:** Implemented Headless CMS solutions to empower clients with dynamic content management, reducing developer dependency for marketing updates.
- Collaborated with designers and product leads using Figma, ensuring pixel-perfect frontend implementation.

Stack: TypeScript · Next.js · React · Astro.js · TailwindCSS · ShadCN · Radix UI · React Hook Form · Zod · Headless CMS · Resend · Core Web Vitals · Figma

Self-Employed / SaaS Developer | *Full Stack Developer & AI Engineer* | Sep 2022 – Present

Remote

I design and build complete, multi-tenant SaaS products from scratch — commercial products built to sell, not demos. I own every layer of the product lifecycle: UX/UI, database design, type-safe APIs, billing, authentication, AI flows, testing, and deployment.

- Built and shipped **multiple production SaaS platforms** — from a multi-tenant CRM to a real-time chat-as-a-service product — each architected for commercialization with subscription billing, secure per-tenant data isolation, and role-based access control.

- Turned products into revenue-ready services with **Stripe subscriptions**, tiered plans, and plan-based feature gating — handling the full path from pricing to billing and milestone invoicing.
- Delivered real-time and AI-driven features, including live messaging, architected RAG systems, and LLM-powered flows hardened with per-tenant quotas, rate limiting, and input sanitization.
- Engineered for reliability and trust with **end-to-end type safety, TDD and E2E testing**, and automated CI/CD — shipping continuously with confidence.
- Owned the **full product lifecycle**, taking ideas from design through to containerized cloud and edge deployment, and integrating third-party services (payments, auth, calendars, cloud) to automate and extend functionality.

Stack: TypeScript · Next.js · React 19 · Node.js · Hono · Python · tRPC · Drizzle ORM · Prisma · PostgreSQL · Better Auth · Clerk · WebSocket · RAG · AI SDK · LLM · Stripe · Turborepo · Bun · Docker · AWS (EC2/S3) · Cloudflare Workers · Vitest · Playwright · TDD · CI/CD

Code Wise Mentorship | *Full Stack Developer (AI / LLM)* | Nov 2025 – Jun 2026

Remote

Designed and built DeliveryChat, a multi-tenant chat-as-a-service SaaS that lets companies embed a customizable real-time chat widget on their websites so end users can reach support directly from the page. I owned it end-to-end — architecture, database, widget, billing, AI flows, and deployment — as a single type-safe Turborepo monorepo.

- **Multi-Tenant SaaS Architecture:** Architected a monorepo (Turborepo/Bun) with an admin dashboard (TanStack Router + React 19), an embeddable widget (React Router v7, IIFE build, Shadow DOM isolation), an Astro landing page, and a Hono edge API. Enforced full per-tenant isolation via subdomain resolution and prefixed PostgreSQL tables (Drizzle ORM).
- **Real-Time Messaging:** Built a room-based WebSocket manager broadcasting conversation lifecycle events to staff in real time, with race-condition-safe operator assignment.
- **AI-Powered Discovery (LLM):** Designed an LLM-driven interview flow as a state machine with a provider port over Groq, hardened with per-tenant quotas, rate limiting, and input sanitization.
- **Auth & Access Control:** Implemented RBAC with Better Auth (anonymous, bearer, email-OTP, organization plugins) across super_admin / admin / operator tiers, plus dual auth for widget visitors via scoped API keys.
- **Billing:** Integrated Stripe subscriptions with webhook-driven status gating, plan-based feature limits (Free/Basic/Premium/Enterprise), and per-tenant rate limiting.

- **End-to-End Type Safety:** A Hono RPC client gives the React admin compile-time contracts from the API — any route change surfaces instantly as a TypeScript error on the frontend.
- **Quality & Delivery:** Built with TDD (Vitest + Playwright E2E), Infisical-managed secrets, and CI/CD, deployed to Cloudflare Workers.

Stack: TypeScript · SaaS · Multi-tenant · WebSocket · Hono · PostgreSQL · Drizzle ORM · React 19 · TanStack · Astro · Better Auth · Stripe · LLM/AI (Groq) · Turborepo · Bun · Cloudflare Workers · TDD

EDUCATION

Senac São Paulo Associate of Science in Systems Analysis and Development Feb 2024 – June 2026

CERTIFICATIONS & SKILLS

- *Agile: Scrum Methodologies (DIO)*
- *React & Next.js: Rocketseat & Udemy (Advanced Level)*
- **Scrum Agile Methodologies - DIO - Jul 2021**

LANGUAGES

- **English - Advanced**
- **French - Basic**
- **Portuguese - Native**
